

Migrant Birds are Biodiversity Ambassadors for Our World

Every year from October to April, more than 150 migrant bird species visit Namibia from northern and central Africa, Europe and Asia

Global Threats to Biodiversity

Air pollution

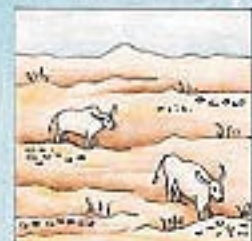

Water pollution

Pesticide pollution

Deforestation

Overgrazing

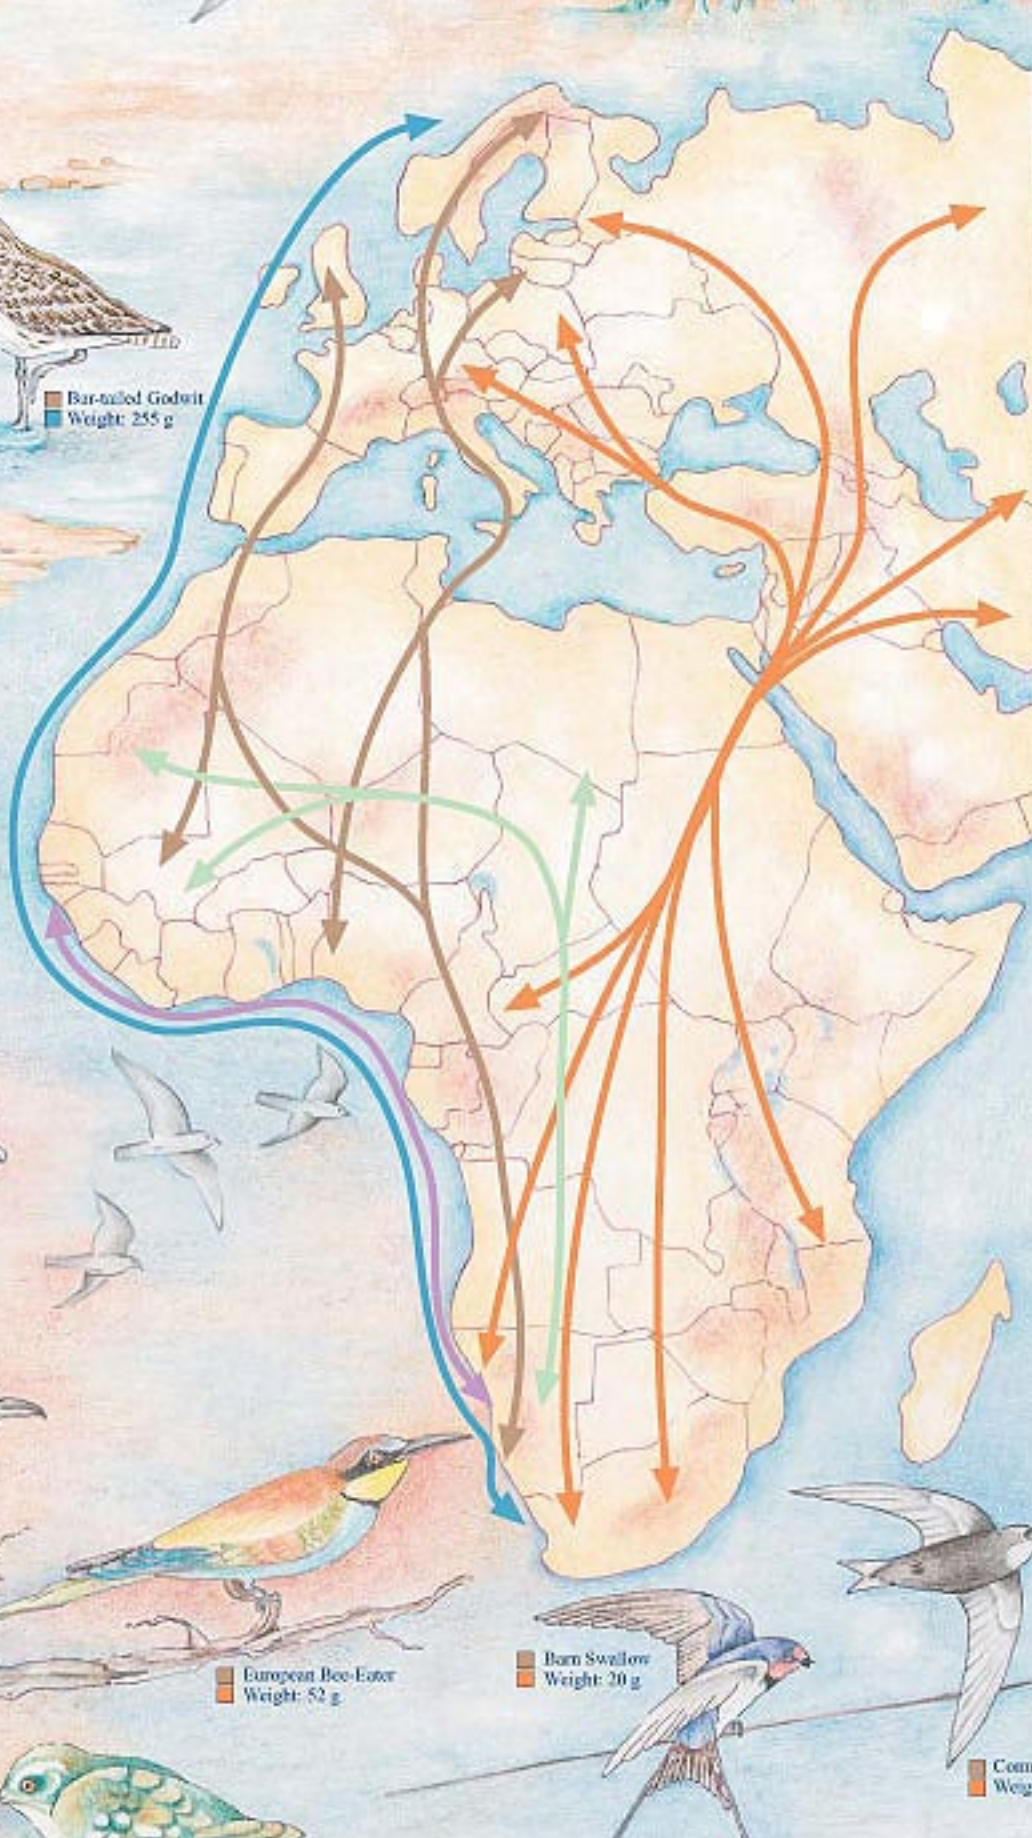

Powerline collisions

Illegal hunting

Climate change

Key to migration routes

- Orange: Palearctic migrants fly from Europe and Asia to Africa
- Green: Intra-african migrants fly a north-south route in Africa
- Purple: The coastal route to and from west Africa
- Blue: Many wading species use a coastal migration route

A satellite tracked Arctic Tern flew 70 900 km in one year
